

FOLD & GO RIGID HEDDLE LOOM FLOOR STAND  
ASSEMBLY INSTRUCTIONS (refer to photo on back)

- 1) Position short base pieces with notches in, as shown. Insert #3 bolts through **base pieces** from bottom. Align **cross bar** so the bolts pass through holes provided. Secure bolts with flat washer, lock washer and wing nut above **cross bar**.
- 2) Position **long uprights** in **base** notches; slotted ends up and facing forward, as shown below. Pass #2 bolts through **long uprights**, then **base pieces**, securing with flat washer, lock washer and wing nut.
- 3) Position **short uprights** outside the **base pieces**, with slotted ends up and facing back toward the **long uprights**. Pass #2 bolts from the inside through remaining hole in each **base piece**, then through the hole in the **short upright**. Secure each bolt with a flat washer, lock washer and wing nut.
- 4) Position each of the aluminum brackets in slots provided at the top of each upright, notched bracket ends up. Attach brackets with #1 bolts, going from the inside of the stand to the outside. Brackets in each pair of uprights (back pair and front pair) must be attached with the same choice of the 3 optional holes in the aluminum (so loom cross pieces will be parallel to the floor when loom is mounted onto the stand). Secure bolts with flat washers, lock washers and wing nuts.

ATTACHING THE LOOM

A separate hardware pack with four 1-1/2" bolts and wing nuts, plus 8 washers is included with your Floor Stand. This hardware is used to attach your Fold & Go Loom to the Floor Stand. Slide each bolt through a washer, then through holes provided in the loom's sides (from inside the loom to the outside). Slide washers onto each bolt (outside the loom's sides); add wing nuts to hold them in place. Position aluminum brackets so notched ends fit between bolt heads and washers inside side pieces (bolt heads will seat in bracket notches; washers will prevent aluminum from discoloring the cherry wood sides). Secure with wing nuts. Check and adjust for a comfortable weaving position; raise or lower brackets as necessary for your desired weaving height and angle.

When weaving, place your feet on the floor stand cross bar for added stability.

### STORING YOUR LOOM ON THE STAND

To temporarily store your loom and stand, loosen the back set of “attaching” bolts, remove loom from **long upright** brackets (the back), leave loom attached to **short upright** brackets (the front). Lower loom and pivot **short uprights** back so loom hangs upside down and rests against the **long uprights**.

### ASSEMBLY NOTES

Hardware: Bolts go through wood parts from inside to outside surfaces.

Hardware for Floor Stand Assembly and Bracket positioning

#1: 1-1/2” bolts, smooth tops (4)

#2: 2” bolts, smooth tops (4)

#3: 3” bolts, slotted tops (2)

Recap:

-Bolts are secured with flat washers, followed by lock washers and wing nuts.

-Aluminum Support Brackets are positioned in slots provided in wood uprights, and secured with bolts (#1) through holes selected to achieve desired weaving height and angle.

---

Hardware used to “attach” loom to stand

1-1/2” bolts and wing nuts (4 of each); washers (8)

“Attaching” bolts are secured with flat washers and wing nuts.
